Flow sensor for continuous flow measurement

- Economic integration in pipe systems without any additional piping
- Measuring principle: optic or magnetic
- Programmable output: 1 analog 4-20 mA and/or 1 transistor output (frequency or switch)
- Outputs programmable through interface on USB port (PC)

The paddle-wheel flow sensor for continuous flow measurement is especially designed for use in neutral, slightly aggressive, solid free liquids in its magnetic measuring version and for use in liquids which let pass the infra-reds in its optic measuring version. The sensor is made up of a fitting (Type S012) and an electronic module (Type SE12) connected together with screws. The Bürkert designed fitting system ensures simple installation of the sensor into all pipes from DN 06 to 50. It can also be installed in fluid block systems.

The sensor produces a programmable frequency pulse signal, proportional to the flow rate, which can easily be transmitted and processed by a Bürkert remote transmitter/indicator (type 8025/8032), or a programmable switch output or a 4-20 mA signal.

General data	
Compatibility	With fittings S012
Materials	
Housing	PPS
Cable plug M12 (gland on request)	PA
Materials wetted parts	
Fitting	Brass, stainless steel 1.4435/316L, PVC, PP or PVDF
Paddle-wheel, holder	PVDF
Axis and bearing	Ceramics (Al ₂ O ₃)
Seal	FKM (EPDM option)
Electrical connection	Steerable fixed M12-5 pin connector (or with 1 m cable length, on request)
Connection cable	1.5 mm ² max. cross-section
Complete device data (fitting + electronic module)	
Pipe diameter	DN 06 to 50
Measuring range	0.3 to 10 m/s
Measuring element	Optical (or magnetical paddle-wheel, on request)
Medium temperature with	
PVC fitting	0 up to 60°C
PP fitting	0 up to 80°C
St.st., brass or PVDF fitting	-15 up to 100°C (if T ^{ambient} ≤ 45°C) or -15 up to 90°C (if 45°C ≤ T ^{ambient} ≤ 60°C)
Fluid pressure max.	PN10 (with plastic fitting) PN16 (with metal fitting)
Viscosity / Solid particles rate	300 cSt. max. / max. 1% (size of particles 0.5 mm max.)
Accuracy	with standard K-factor ≤ ±(0.5% of FS.* + 2.5% of Reading) ¹⁾
Linearity	≤ ±0.5% of FS.* (at 10 m/s)
Repeatability	≤ ±0.4% of Reading ¹⁾

* FS. = Full scale (10 m/s)

¹⁾ Under reference conditions i.e. measuring fluid = water, ambient and water temperature = 20°C, applying the minimum inlet and outlet pipe straight, matched inside pipe dimensions.

Electrical data	
Power supply (V+)	12-36 V DC, filtered and regulated
Current consumption	< 60 mA (at 12 V DC for current version - without load)
Reversed polarity of DC	Protected
Voltage peak	Protected
Short circuit	Protected for transistor output
Output	
Transistor version	Transistor NPN (default setting) / PNP (programmable on request), open collector, max. 700 mA, output NPN: 0.2-36 V DC (default setting) output PNP: V+ power supply frequency or switching mode
Current version (programmable on request)	4-20 mA, sinking (default setting), image of flow velocity (default setting), programmable on request (sourcing mode); Loop impedance max.: 1125 Ω at 36 V DC; 650 Ω at 24 V DC; 140 Ω at 12 V DC

Environment	
Ambient temperature	-15 up to +60°C (operating and storage)
Relative humidity	≤ 80%, without condensation

Standards, directives and approvals	
Protection class	IP67 with multipin M12 (IP65 with cable)
Standard and directives	
EMC	EN 61000-6-3 (2001), EN 61000-6-2 (2001)
Pressure	Complying with article 3 of §3 from 97/23/CE directive.*
Vibration	EN 60068-2-6
Shock	EN 60068-2-27
Approval / Certificate on request	3.1 Certificate; 2.2 Certificate; Rugosity Certificate; Calibration Certificate; FDA (with EPDM seal) - stainless steel fitting only

* For the 97/23/CE pressure directive, the device can only be used under following conditions (depend on max. pressure, pipe diameter and fluid).

Type of fluid	Conditions
Fluid group 1, §1.3.a	DN≤25 only
Fluid group 2, §1.3.a	DN≤32, or DN>32 and PN*DN ≤1000
Fluid group 1, §1.3.b	PN*DN ≤2000
Fluid group 2, §1.3.b	DN≤200

Pressure / temperature chart

DTS 1000083708 EN Version: J Status: RL (released | freigegeben | validé) printed: 12.05.2009

Main features

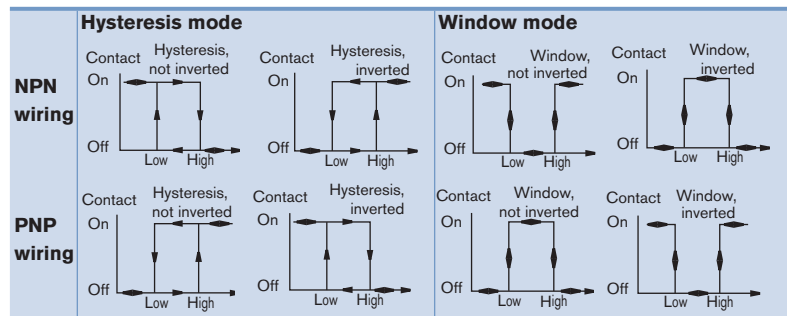

8012 with optical (standard) or magnetical (on request) principle

Version with Transistor output

- ▶ Transistor output: NPN (standard) or PNP (on request) mode.
- ▶ With one programmed transistor output mode (4 possibilities)
 - Raw frequency (2 pulses per paddle-wheel rotation) (standard)
 - Proportional frequency (1 pulse every determined volume) (on request)

- Switching mode
 - 2 switching modes for the output, either hysteresis or window, inverted or not, depending on transistor output version
 - Programmable delay before switching

- Detection of flow direction - only with optical principle.

Version with Transistor and current outputs

Transistor output:

- ▶ Same features described as above

Current output:

- ▶ with sinking (standard) or sourcing (on request) wiring
- ▶ 8012 with programmable current output
 - 4-20 mA current corresponding to paddle-wheel frequency (0-250 Hz) (standard)
 - 4-20 mA current corresponding to a flow range (on request)

- Damping of fluctuation of current output through filter function
- Generation of an alarm current (22 mA) - when fluid circulation is opposite to the direction indicated by the arrow on the side of the housing (only versions with optical principle) or when full scale has been exceeded (versions with optical or magnetical principle).

Design and principle of operation

The flow sensor 8012 is built up with an electronic module SE12 with integrated measurement paddle-wheel associated to a fitting S012. This connection is made by means of screws. In a 3-wire system, the signal can be displayed or processed directly. The output signal is provided via a steerable male M12-5 pin connector.

When liquid flows through the pipe, the paddle-wheel is set in rotation producing a measuring signal in the transducer. Two electronic module versions allow the following outputs:

- with one pulse output (either NPN or PNP transistor output - programmable). An external power supply of 12-36 V DC is required. This pulse output generates a signal which frequency is proportional to the flow velocity. It is designed for connection to any system with open collector NPN or PNP frequency input.
- with one 4-20 mA current output and one pulse output (either NPN or PNP transistor output programmable). An external power supply of 12-36 V DC is required. The 4-20 mA output delivers a current which value is the image of the flow velocity.

The electronic module SE12 is equipped with 2 indicator LEDs, visible by transparency under the cable plug (standard) or on the opposite side of the cable plug (on request). When the device is energized, the green indicator LED lights up and then flashes proportionally to the rotation frequency of the paddle-wheel. The switch on of the red indicator LED indicates a malfunction of the device.

Installation

Minimum straight upstream and downstream distances must be observed. According to the pipe's design, necessary distances can be bigger or use a flow conditioner to obtain the best accuracy. For more information, please refer to EN ISO 5167-1.

EN ISO 5167-1 prescribes the straight inlet and outlet distances that must be complied with when installing fittings in pipe lines in order to achieve calm flow conditions. The most important layouts that could lead to turbulence in the flow are shown below, together with the associated prescribed minimum inlet and outlet distances. These ensure calm, problem-free measurement conditions at the measurement point.

The flow rate sensor can be installed in either horizontal or vertical pipes, but following additional conditions should be respected:

- always install the 8012 so that the paddle-wheel axis is horizontal.
- ensure the pipe is maintained full at all times, near the sensor
- ensure the pipe design does not allow the build-up of air bubbles or cavities within the medium, near the sensor

When installing the 8012 on an horizontal pipe, make sure the paddle-wheel is oriented down

Pressure and temperature ratings must be respected according to the selected fitting material.

The suitable pipe size is selected using diagram Flow / Velocity / DN.

The sensor is not designed for gas flow measurement.

Selection of fitting / pipe size

Example:

- specification of nominal flow: 10 m³/h
- ideal flow velocity: 2...3 m/s
- for these specifications, the diagram indicates a pipe size of DN40 [or DN50 for (*) mentioned fittings]

- * for following fittings:
- with external threads acc. to SMS 1145
 - with weld-ends acc. to SMS 3008, BS 4825 / ASME BPE or DIN 11850 Series 2
 - with Clamp acc. to SMS 3017 / ISO 2852, BS 4825 / ASME BPE or DIN 32676

Flow sensor Type 8012 possibilities

A flow sensor Type 8012 consists of:

- a sensor electronic module SE12 with either optical or magnetical measuring principle, with only pulse output or with both pulse and 4-20 mA current outputs - programmed in **standard** (see ordering chart Type SE12) or **customized** (see specifications sheet on last page). The electrical connection is carried out through multipin M12-5 or 1 m cable.
- a fitting Type S012 available in different materials providing many installation options of the sensor electronic module into all pipes, ranging from DN6 to DN50, due to the large range of connections (see specifications sheet on last page).
- screws and O-ring (see left-hand page - ordering chart for accessories).

The following charts indicate the different possibilities:

Sensor electronic module Type SE12 (standard programmed)

Specifications	Voltage supply	Pipe connection	Output*	Connector	Item no.

Note: Such new 8012 configuration should be ordered to your Bürkert Sales Center.

Interconnection possibilities with the sensor Type 8012

Fluid block system for the sensor Type 8012

The modular concept of our sensor electronic module Type SE12 allows fully customized, pre-mounted and tested solutions to completely meet application needs. It is designed for being mounted in a system block, associated with other Bürkert products. This allows cost reduction and compact design for customized solutions.

Please contact your Bürkert local office to have individual counselling and engineering support in order to find the best solution corresponding to your application.
